

# Product Information sheet

## EM Agriton System®.

Sustainable agriculture for a profitable farm

### Organo Fresh EM® TMR

Suppresses heating and spoilage of feed mixes

#### Organo Fresh TMR

A liquid ready to use solution based on EM Effective Micro-organisms to prevent heating and spoilage in animal feed mixes. 100% organic natural components improves keeping qualities of feed especially in warm weather

EM-TMR heat reducer is a product based on fermentation by microbes.

The product itself is not microbiologically active.

TMR contains a mixture of organic acids and alcohols.

TMT contains also a yeast extract due to the fact that yeast is used in the fermentation process.

The effectivity of TMR is based on the low pH (2.8-2.9) the product has.

The natural acidic composition makes it totally harmless for man, animal and machinery. It is not corrosive.

#### Application:

You simply mix it with your TMR in a dosage of 1 to 2 litre per ton product.

If the mixing products are very dry you have to dilute the TMR with water to a maximum of 1 to 2 litres in 10 litres of water.

Pour the TMR in the mixer while mixing the TMR.

You can also use a sprayer to divide the product properly at the TMR.

It is very important that the TMR is divided properly.

TMR has a slightly sour taste and is absolutely harmless.

Due to its alcohol and acid content it will act also as a appetiser.

The herds intake of organic matter from TMR will increase.

Packaging: Available in the following

1000 Ltrs containers  
4x 200 Ltrs containers on a pallet.  
48x 20 Ltrs on a pallet.

Shelf-life time after opening 2 months.  
Shelf-life time unopened 1 year.
